S.E.E.R. LANGUAGE FILE NOTE

-- CHARACTER REPLACEMENT

When translating from one language to another, often times 'special'
characters may be used. S.E.E.R. pushes a default character set of
UTF-8, which is more or less an English-Language friendly Latin
character set.

40 A lot of the common hyphons and what not need to be replaced. This
is a list, which is accurate to date for the SPANISH and FRENCH
translations, and will obviously grow over time if other characters
are encountered.

CHARACTER TO REPLACE

REPLACE WITH

```
